

N

NITROGEN

Healthy, green foliage

Nitrogen (N)

Nitrogen is the engine behind leaf and stem development.

Nitrogen propels the synthesis of chlorophyll, the green pigment responsible for photosynthesis.

Proper nitrogen levels result in lush, vibrant foliage.

P

PHOSPHORUS

Strong roots and blooms

Phosphorus (P)

Phosphorus is needed for root development, energy transfer, and flowering.

Phosphorus is particularly important during the early stages of plant growth, encouraging robust roots systems and building a strong foundation for overall plant health.

K

POTASSIUM

Healthy plant growth

Potassium (K)

Potassium is a versatile player in plant physiology, regulating water uptake, strengthening cell walls, and boosting disease resistance.

Potassium contributes to the overall vigor and resilience of plants, making it an important nutrient in fertilization.
